Kitchen planning isn't rocket science, but it does take some homework before you start.

1. Get a general idea of how the space will be used.
2. Examine the traffic flow in and out of the space.
3. Make special note of architectural accents or barriers.
4. Design your kitchen or bath to be family-friendly.
5. Avoid hazards in design or cooking choices for small children.
6. Plan with electrical and water lines in mind.
7. Most of all, work within the space to achieve a pleasing mix of cabinets and open areas.

With a little forethought, you can design the perfect kitchen for almost any size space!

Getting Started

Determine the look you want to achieve.

Whether it is Traditional or Contemporary or something in between, Curtis Lumber has more than enough style and color choices to please even the most discriminating tastes.

Determine Your Budget

National Kitchen and Bath Association typical budget for a kitchen remodel:

- 48% Cabinets
- 16% Labor
- 13% Countertops
- 8% Appliances
- 6% Interior Design
- 4% Plumbing Fixtures
- 4% Flooring
- 1% Lighting

(source National Kitchen & Bath web site "Typical Budget Breakdown")

Select a cabinet range and style to fit your budget and decor

From economical stock cabinets to semi-custom and even a full-custom option, Curtis Lumber has cabinet styles and choices for every style and budget.

Determine fixtures and appliances

A wide range of kitchen appliances can be incorporated into the design as accents or to blend with the overall look using customized matching panels. Determine where and how you want your appliances and fixtures in your new space.

For kitchens, select a work triangle and traffic flow

For the greatest efficiency, kitchen workspace is generally laid out in what kitchen designers call a "work triangle."

Examine these sample triangles and create a work triangle for your space

- No one length of the work triangle should be longer than 8'-9'
- Your triangle's perimeter should be no longer than 26'
- The work triangle should not be in the middle of traffic flow

Kitchen Measuring Guide

Measuring your kitchen is easy. By following these simple instructions and using the graph paper provided you can help speed along the design process for your new kitchen.

Simply follow these instructions:

1. Start in one corner (A) and measure to the edge of the first door or window and mark down this measurement.
2. Measure the door or window (B) from one outside edge of the trim to the other outside edge.
3. Now, measure from the outside of the trim to the corner (C) or next door or window.
4. Repeat Step 1 through Step 3 until you have measured the entire room.

Please Note: Double check your measurements by measuring the entire wall length from wall to wall and comparing it to your individual measurements taken in Steps 1-3.

Example:

(A) to (C): Entire wall measures 144"

From (A) to (B) = $49\frac{1}{2}$ ". (B) = 45". (B) to (C) = $49\frac{1}{2}$ "

Totals: $49\frac{1}{2}$ " + 45" + $49\frac{1}{2}$ " = 144"

Obstacles to note:

Ceiling Heights
Appliance Dimensions
Windows
Alcoves
Exterior Walls
Soffits
Doors
Steps

Utilities to note:

Receptacles
Lights
Water Lines
Radiators
Switches
Gas Lines
Heat Vents
