Bath planning isn't rocket science, but it does take some homework before you start.

Determine the look you want to achieve

Whether it is Traditional or Contemporary or something in between, Curtis Lumber has more than enough style and color choices to please even the most discerning tastes. With almost limitless options for your bathroom project, it is important to narrow in on the looks, functions, and layouts that appeal to you. A great way to do this is to cut out bathroom pictures from magazines and brochures and visit bathroom websites to view their photo galleries. You can view our Bathroom Inspirations Gallery on our web site. Even if a picture isn't your ideal design, but contains a look or design feature that you like, you should save it to share with your Designer.

Determine your budget

The Designers at Curtis Lumber can help you with this process. Be honest with them about your budget expectations. Vanities, whirlpools and floor coverings come in a variety of price ranges. Any bath design can be quoted at various price ranges. Some changes may be required, but the basic design can usually be achieved. Do some research on your own to help complete the total budget picture. Price showers and tubs, lighting and flooring, ask friends who have remodeled about the costs and read magazines to help you mentally prepare a budget that is realistic.

Determine fixtures and add-ons

Bathroom fixture selections play a key role in the overall design and look of your new room. Determine what type of fixtures you want in your bathroom. Whirlpools, showers with seats, and laundry cabinets will all impact your design. The styles and varieties of fixtures have grown tremendously in recent years and have become showpieces in bathroom design. Shop your local Curtis Lumber to narrow down your selection.

Make a list of the things you like and dislike about your current bathroom

Our Designers will want to know what you are trying to accomplish with your project. You should take into consideration your current lifestyle, for example—is your bathroom clean and neat and only used for guests, or does the entire family use it at the same time? These pieces of information help the designer create a bathroom that you will fall in love with and is customized to your family's lifestyle. Be sure to complete the Curtis Lumber Bathroom Planning Checklist located on our web site prior to visiting our store.

Take some preliminary measurements

Your Designer will need to know the amount of space they have to work with, so simple measurements are a key component to the process and be sure to bring it with you to your first meeting. Use Curtis Lumber's simple measuring guide to help you through this process. Accuracy is important, so please double check your work. The Curtis Lumber Bath Planner is another tool you can use to guide you through the preliminary process.

Visit our store

Once you've done some of your background research, stop into our store and take a look at the different styles of vanities and fixtures on display. Call to set up an appointment with a Designer to take a guided tour and discuss your project to start you on the way to your new bathroom.

Bath Measuring Guide

Measuring your bathroom is easy. By following these simple instructions and using the graph paper provided you can help speed along the design process for your new bath. Simply follow these instructions:

1. Start in one corner (A) and measure to the edge of the first door trim or window trim and mark down this measurement.
2. Measure the door or window (B) from one outside edge of the trim to the other outside edge.
3. Now, measure from the outside of the trim to the corner (C) or next door trim or window trim.
4. Repeat Step 1 through Step 3 until you have measured the entire room.
5. Measure ceiling height in each corner.

Please Note: Double check your measurements by measuring the entire wall length from wall to wall and comparing it to your individual measurements taken in Steps 1-3.

Example:

(A) to (C): Entire wall measures 144"

From (A) to (B) = 49-1/2". (B) = 45". (B) to (C) = 49-1/2"

Totals: 49-1/2" + 45" + 49-1/2" = 144"

Obstacles to note:

Ceiling Heights
Windows
Alcoves
Exterior Walls
Soffits
Doors
Steps
Ledges

Utilities to note:

Receptacles
Lights
Water Lines
Radiators
Switches
Gas Lines
Heat Vents

Ask Us For Help or Advice!

Your Curtis Lumber Designer has the experience and professional training to help you plan and answer any questions you may have about bath design and installation.

Bath Floorplan

Bath Planning Checklist

Please fill out this planning sheet to the best of your ability in order to help you refine what you might want in your new bathroom. Our Designers will walk you through the process in-person, however, this checklist will help you to think about what you might want. Bring this sheet to a showroom or to your first appointment with your Designer.
