Kitchen planning isn't rocket science, But it does take some homework before you start.

- 1. Get a general idea of how the space will be used.
- 2. Examine the traffic flow in and out of the space.
- 3. Make special note of architectural accents or barriers.
- 4. Design your kitchen or bath to be family-friendly.
- 5. Avoid hazards in design or cooking choices for small children.
- 6. Plan with electrical and water lines in mind.
- 7. Most of all, work within the space to achieve a pleasing mix of cabinets and open areas.

With a little forethought, you can design the perfect kitchen for almost any size space!

Getting Started

Determine the look you want to achieve.

Whether it is Traditional or Contemporary or something in between, Curtis Lumber has more than enough style and color choices to please even the most discriminating tastes.

Determine Your Budget

National Kitchen and Bath Association typical budget for a kitchen remodel:

48% Cabinets
16% Labor
13% Countertops
8% Appliances
6% Interior Design
4% Plumbing
4% Flooring
1% Lighting
(source National Kitchen and Bath web site "Typical Budget Breakdown")

Select a cabinet range and style to fit your budget and decor

From economical stock cabinets to semi-custom and even a full-custom option, Curtis Lumber has cabinet styles and choices for every style and budget.

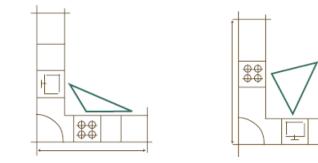

Determine fixtures and appliances

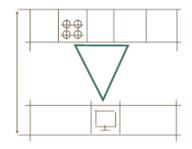

A wide range of kitchen appliances can be incorporated into the design as accents or to blend with the overall look using customized matching panels. Determine where and how you want your appliance and fixtures in your new space.

For kitchens, select a work triangle and traffic flow

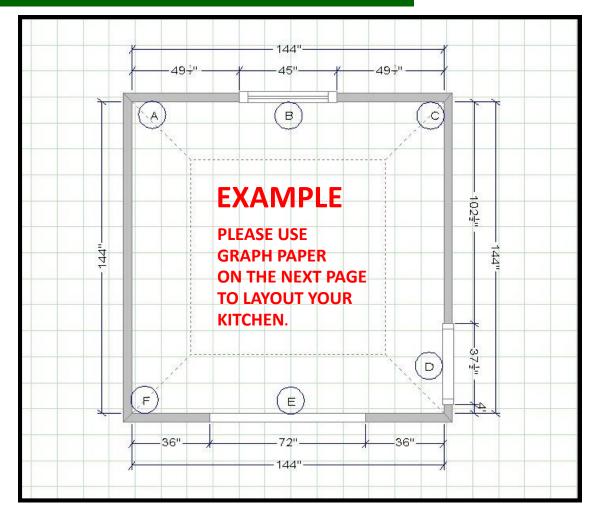

For the greatest efficiency, kitchen workspace is generally laid out in what kitchen designers call a "work triangle." Examine these sample triangles and create a work triangle for your space.

- No one length of the work triangle should be longer than 8' or 9'
- Your triangle's perimeter should be no longer than 26'
- The work triangle should not be in the middle of traffic flow

Kitchen Measuring Guide

Measuring your kitchen is easy. By following these simple instructions and using the graph paper provided you can help speed along the design process for your new kitchen. Simply follow these instructions:

- 1. Start in one corner (A) and measure to the edge of the first door trim or window trim and mark down this measurement.
- 2. Measure the door or window (B) from one outside edge of the trim to the other outside edge.
- 3. Now, measure from the outside of the trim to the corner (C) or next door trim or window trim.
- 4. Repeat Step 1 through Step 3 until you have measured the entire room.
- 5. Measure ceiling height in each corner.

Please Note: Double check your measurements by measuring the entire wall length from wall to wall and comparing it to your individual measurements taken in Steps 1-3.

Example:

(A) to (C): Entire wall measures 144" From (A) to (B) = 49-1/2". (B) = 45". (B) to (C) = 49-1/2" Totals: 49-1/2" + 45" + 49-1/2" = 144"

Obstacles to note:

Ceiling Heights Appliance Dimensions Windows Alcoves Exterior Walls Soffits Doors Steps

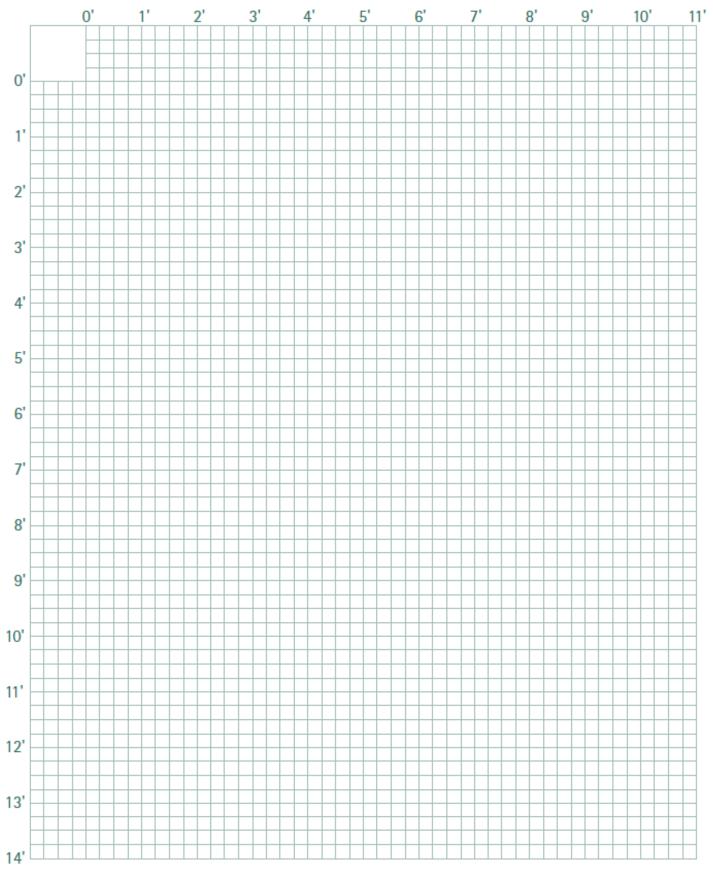

Utilities to note: Receptacles Lights Water Lines Radiators Switches Gas Lines

Heat Vents

Ask Us For Help or Advice! Your Curtis Lumber Designer has the experience and professional training to help you plan and answer any questions you may have about kitchen design and installation.

Kitchen Planning Checklist

Please fill out this planning sheet to the best of your ability in order to help you refine what you might want in your new kitchen. Our designers will walk you through the process in-person, however, this checklist will help you to think about what you might want. Bring this sheet to a showroom or to your first appointment with your designer.
